

Problem Set 10
Advanced Macroeconomics
Winter 2025/26

Calibrating a Real Business Cycle Model

Consider the code `RBC.m` from lecture 8 that uses the data file `vgrqde.csv` and the Dynare file `ramseygrowthext_stoch.mod`.

1. Does the code run?
2. Which variables are defined?
3. Which operations are done with the data in the vector *MyData*?
4. Which plots are produced?
5. What do you observe?
